A collection of technical tidbits and musings
from the club's technical advisor

Here's a great project for any RVer: Build your own sewer hose storage! It's easy to build, inexpensive, and will hold both a 10' and a 20' hose. Plus, it will protect your hose, and it won't rust like your bumper storage. Here's how:

Go to your local building supply store and pick up a single length of 4" thinwall PVC drain pipe. Get 2 sets of the standard 4" threaded ends and some PVC cement.

At the rig, find a place where the pipe can be mounted underneath and the ends can be accessed from either side of the rig. The rear bumper area or under the rear of the rig is usually a good spot. Cut the pipe to a few inches less than the rig is wide, and glue on the ends. This pipe can then be mounted to the underside of the rig using a variety of means.

The simplest is to use some "plumber's strap" to hang the completed pipe from the underside of the rig.
